

FOR IMMEDIATE RELEASE:

SOADEx, Inc. and Geneva Foundation Launch Innovative PTSD Health Care IT Project

Boston, Massachusetts
January 05, 2012

SOADEx, Inc. and the Geneva Foundation entered into an innovative joint Health Care IT project December 2, 2010. The project engineers a knowledge management repository with reasoning capabilities for predicting relative risk, developing diagnostic guides, and creating resource-capacity planning models for the treatment of Post-traumatic Stress Disorder.

The product allows health care professionals and their patients to collaborate in treating PTSD and other disorders. Health care planners can use the resource-capacity capabilities to optimize available resources, increase capacity, and improve access to care.

SOADEx cognitive engineers are developing the heart of this advanced medical product: the Jboss Drools-implemented rule engine for decision logic and modeling intelligence. A Drools Grid provides a distributed network of intelligent agents hosting Drools sessions that make choices or respond based on the environment. The Drools Workbench provides tools to define and build Decision Nodes that evaluate clinical data using rule sets. SOADEx is also providing GUI and branding development, project management, testing, and technical documentation in this critically important medical domain.

About SOADEx, Inc.

SOADEx, Inc. was established in December 2006 to provide business and technology consulting services focused on Identity Management, Web Services, Web Services Security and integration of enterprise Service-Oriented Architecture governance solutions. The company offers comprehensive professional services specializing in the migration from silo-based application development to a SOA-based approach. The extensive SOADEx domain and field experience in securing, deploying, and managing SOA applications enables it to shorten the time to market of a client's service-based applications, and facilitate the design, development, and delivery of a high-quality business solution.

About Geneva Foundation

The Geneva Foundation was established in April 1993 with the sole mission to promote and support the advancement of military medicine. Since Geneva's inception, the Foundation has developed into a leading non-profit organization in support of military medicine in part by building relationships with highly skilled, exceptionally motivated, world recognized researchers and medical professionals. Geneva's core values of integrity, superior customer service, quality, innovation, teamwork, and respect for all remain the fundamental guiding principles that are directly linked to over 15 years of success for the organization.
